What is an off-grid solar power inverter?

An off-grid solar power inverter, also known as a stand-alone inverter or solar battery inverter, is a device used in an off-grid solar system. It operates independently of the power grid and can't feed electricity to the grid. It has no provision to tap into the grid electricity.

What is the output power of an off grid inverter?

The rated power output of an off-grid inverter is decided by the load. However, the start power of motor of some inductive-load devices like air conditioner or water pump is 3-5 times of the rated power. Thus, the off-grid inverter has special requirements on the overload situation.

Do you need an off-grid inverter?

Yes, if you want to use solar panels to power your home off the grid. An off-grid inverter's primary function is to convert DC electricity from solar panels into useable AC for your home's appliances.

How much power can an off-grid inverter handle?

An off-grid inverter with power-frequency isolation technology can handle peak power that is 3 times the rated power. For instance, a 3kW high frequency off-grid inverter can handle a set of 1P air conditioner, which requires about 5.5kVA to start.
