the inverter must somehow dispose of $1.7\% \times 15 \text{ kW} = 255 \text{ W}$ or more of heat & I doubt that such a heat flow would feel "very cool". As the system is export limited to 1.5kw and household power consumption peaks at about 7kw most of the time the 15kw Sigenergy inverter is sitting at around 8.5kw or 50% output or less. Therefore, not much heat.
