

# EU scrambles for energy storage

What does the European Commission say about energy storage?

The Commission adopted in March 2023 a list of recommendations to ensure greater deployment of energy storage, accompanied by a staff working document, providing an outlook of the EU's current regulatory, market, and financing framework for storage and identifies barriers, opportunities and best practices for its development and deployment.

Should energy storage be regulated in Europe?

As renewable energy continues to expand in Europe, energy storage must keep pace to ensure the grid remains flexible and stable. The Energy Storage Coalition urges the European Commission to develop an Action Plan on Energy Storage, providing much-needed regulatory clarity and supporting Member States in scaling up energy storage capacity.

Is energy storage the key to decarbonising the EU energy system?

The Commission has published today a series of recommendations on energy storage, with concrete actions that EU countries can take to ensure its greater deployment. Analysis has shown that storage is key to decarbonising the EU energy system.

Why is energy storage important in the EU?

It can also facilitate the electrification of different economic sectors, notably buildings and transport. The main energy storage method in the EU is by far 'pumped hydro' storage, but battery storage projects are rising. A variety of new technologies to store energy are also rapidly developing and becoming increasingly market-competitive.

Should energy storage be included in network charges and tariff schemes?

In concrete terms, the Commission is recommending EU countries to consider the specific characteristics of energy storage when designing network charges and tariff schemes and to facilitate permit granting. The Commission also encourages further exploiting the potential of energy storage in the design and operation of the networks.

What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.

The funds, to be directed to renewables, energy efficiency, grids and storage, electric vehicle infrastructure and new technologies, are expected to mobilise up to EUR115 billion (US\$113.8 billion ...

The European Energy Storage Inventory is the first of its kind at European level to show all forms of clean

# EU scrambles for energy storage

energy storage solutions. Unlike existing databases that focus on specific storage types, this platform surveys and maps a full range of technologies. It offers near real-time data on the deployment of storage facilities across Europe, including an interactive dashboard ...

The obligations set out in the NZIA Regulation are crucial for reaching the EU's 2030 carbon storage target and providing sufficient decarbonisation options for EU industries. Additionally, ...

This Commission department is responsible for the EU's energy policy: secure, sustainable, and competitively priced energy for Europe. Skip to main content ... Commission welcomes new ENTSOG report confirming the importance of storage last winter and need to start refilling as soon as possible. 1 min read; News announcement;

Discover how the EU's policies and regulations drive energy storage innovation, ensuring a clean, secure, and resilient energy future. Key Projects, Initiatives and Market This section outlines key EU projects, initiatives, and market trends in energy storage, highlighting efforts to integrate renewables, enhance grid stability, and support the ...

European Union countries are working on setting up a strategic gas reserve and establishing storage requirements. Officials are urging countries to sign agreements to share gas in emergencies.

The Energy Storage Market in Germany FACT SHEET ISSUE 2019 Energy storage systems are an integral part of Germany's Energiewende ('Energy Transition') project. While the demand for energy storage is growing across Europe, Germany remains the European lead target market and the first choice for companies seeking to enter this fast-developing ...

EASE is actively shaping the legal and R& D funding framework for energy storage at EU level. Members gain direct influence in the European decision-making process. Members benefit ...

energy storage power capacity requirements at EU level will be approximately 200 GW by 2030 (focusing on energy shifting technologies, and including existing storage capacity of approximately 60 GW in Europe, mainly PHS). By 2050, it is estimated at least 600 GW of energy storage will be needed in the energy system.

Good morning. News to start: Nato's European members must agree a "joint road map [and] timetable" with the US to shift the burden of defending the continent, Finland's defence minister ...

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent trend in the ...

Europe scrambles to address energy crisis ... - After 2026, energy storage systems to debut, enhancing grid stability and optimizing use of wind energy. 21.02.2025 Electricity ...

## EU scrambles for energy storage

An EU strategy for clean flexibility can guide the transition away from reliance on fossil flexibility and ensure the complementary deployment of clean flexibility solutions across the EU. The European Commission already ...

Lithium ion batteries being assembled during installation to an energy storage system | Patrick T. Fallon/AFP via Getty Images. The huge number of electric cars that are supposed to hit European roads in coming ...

It comes a few days after the EU's European Parliament approved the bloc's Net Zero Industry Act (NZIA), which seeks to ensure Europe can meet 40% of its clean energy deployment needs with domestically-manufactured products, as reported by our sister site PV Tech.. The new funding opportunity is split into five categories. The bulk, accounting for EUR2.4 ...

In concrete terms, the Commission is recommending EU countries to consider the specific characteristics of energy storage when designing network charges and tariff schemes and to facilitate permit granting. The Commission ...

Europe scrambles to address energy crisis Germany plans \$83.1B for "energy price brakes" in 2023, takes more energy saving measures amid crisis B&#252;sra Nur &#199;akmak | 08.11.2022 - Update : 08. ...

Six Energy Storage Companies Driving The European Market: Northvolt. Founded in 2016 and based in Stockholm, Sweden, Northvolt is an operator of lithium-ion battery plants intended to produce batteries for variety of solutions, including evs and battery storage. Earning the title of a GreenTech Unicorn, after harnessing EUR6.68B to this date ...

Building on the 20% target for 2020, the recast Renewable Energy Directive 2018/2001/EU established a new binding renewable energy target for the EU for 2030 of at least 32%, with a clause for a possible upwards revision by 2023.. To meet the higher climate ambition, as presented in the European Green Deal in December 2019, further revisions of the directive ...

BATTERIES FOR ENERGY STORAGE IN THE EUROPEAN UNION ISSN 1831-9424 . This publication is a Technical report by the Joint Research Centre (JRC), the European Commission's science and knowledge service. It aims to provide evidence-based scientific support to the European policymaking process. The scientific output expressed does not imply a policy

In comparison to Europe, which depends on gas for energy, Asia is less dependent on gas. Head of Asia Pacific power & renewables research at Wood Mackenzie, Alex Whitworth, estimates that the amount of gas used in the nation only accounts for 11% of the total energy mix. The majority of the gas is derived from domestic sources.

The European Commission has officially launched the European Energy Storage Inventory, a real-time dashboard for energy storage. The goal is to list all planned and operational energy...

# EU scrambles for energy storage

The Energy Storage Coalition urges the European Commission to deliver an Action plan on Energy Storage, building on the work already done by the DG Energy and the European Parliament, that will enable Member States and ...

While growth has so far been driven primarily by residential storage systems in households, more and more energy suppliers, solar and wind farm operators, as well as industrial and commercial enterprises, are now acquiring large battery storage systems. According to the "European Market Outlook for Battery Storage 2024-2028" by SolarPower ...

Across Europe, countries have implemented a patchwork of policies and mandates to drive the adoption of energy storage technologies. For example, the EU's Energy Storage ...
