What is an Energy Storage Connector?

Energy storage connectors provide a safe, reliable and efficient connection between energy storage systems and other electrical devices. They are used in home storage system, solar power generation and wind turbines to transfer electricity from the battery to the power grid or vice versa.

How do I connect my energy storage system?

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.

What is a battery energy storage system?

Battery energy storage systems (BESS) Electrochemical methods, primarily using batteries and capacitors, can store electrical energy. Batteries are considered to be well-established energy storage technologies that include notable characteristics such as high energy densities and elevated voltages .

What are energy storage systems?

Energy storage systems are made up of different components that all contribute to the function of the overall system. Benefit from our portfolio of PCB connections, connectors, and electronics housings that demonstrate our strong innovation power.

What is a battery module?

The portfolio ranges from connection technology for photovoltaic panels, to DC connectors for field cabling, right through to device connections for signals, data, and power. Battery modules are the heart of energy storage systems. They contain battery cells in which the electrical charge is stored as chemical energy.

What is battery energy storage (BES)?

Battery energy storage is an electrochemical device that stores energy and provides electricity by discharging that energy at later times. In the wider electricity system, a BES system can defer the consumption of electricity generation to a later time, allowing for more cost-effective and sustainable generation sources to be maximised.

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.
