How long do power tool batteries last?

Most power tool batteries last between 1 and 3 years, depending on how often they are used. Batteries that are used more frequently will typically need to be replaced more often than those that are used less often. The type of battery also plays a role in how long it will last - lithium ion batteries tend to last longer than lead acid batteries.

How long does a Li Ion cordless tool battery last?

A: Li-ion cordless tool batteries typically feature a 300-500 cycle life, which is around 2-3 years. Cycle life indicates how often a battery can be charged before losing its ability to retain a charge. Therefore, you can generally charge a Li-Ion battery at least 300 times before it needs to be replaced.

Do rechargeable power tool batteries corrode?

When your rechargeable power tool batteries have reached the end of their life do not throw them in the trash. According to Power Tool Institute, original manufacturer batteries contain innovative technology to monitor battery health, cell balance, temperature and other critical functions designed to help maintain longer-lasting tools.

Do power tools have lithium ion batteries?

A: While most modern power tools now contain lithium-ion (Li-ion) batteries due to greater run-time, you may still find older tools containing AA, AAA, 9-volt, NiCad or NiMH batteries. NiCad and NiMH batteries can die out for two reasons: memory effect and crystal formation.

What voltage should a tool battery be discharged at?

There will always be some voltage left even when the battery pack no longer runs your tools. They are considered discharged at 1.1V per cell. Using the tool is the safest way to discharge these types of batteries. NiMH batteries have a higher capacity, so they hold more power, but they let it out at a similar rate to the Cadmium batteries.
