12v inverter to 9v

Do you need 9V for other parts of the project or just to power the Arduino? If just to power the Arduino, you would be better served to use a buck converter that goes from 12V to 5V and connect directly to the 5V pin of the Arduino.

For example, if your circuit requires -9V, but the current draw is 80mA, then from this graph the voltage will be pulled all the way down to -5V! So, when working with charge pumps, it helps to know the expected current draw of your circuit. Charge Pump Inverter Schematic. A basic charge pump inverter circuit is shown in Figure 9.5 using the ...

12V to 9V 2A step down dc converter using IC 741 and 2N3055. This circuit designs for modifying a 12V power supply input 12V from a battery or the other. Have the level voltage be down be left 9V be stable or, 9V at 2 Amp DC power supply. By this circuit gives usual equipment, seek easy. Be integrated circuit IC 741 and power transistor 2N3055.

Another dangerous way to overpower an inverter is by using the wrong input voltage on the Driver - say, like putting a 12v battery onto a driver designed for 6volts. Doing this makes the wire glow super bright but you can feel the driver heat up v quickly and again theres risk of a fire - just think how dangerous that is if you are wearing it!
