But the voltage doubler only has efficiencies of ~75% on a good day. And to get from 3.7V to 220V you would need to double the voltage at least 50 times, which would yield efficiencies of less than  $0.5E-6$  which is dismal, since more than 1 Megawatt would be needed to generate 50mA at 220V. In addition to that the circuit would take up a large area.
