Which countries have the most solar power in 2023?

In 2023, Asia had over 840 GW of solar energy capacity. According to Ember, three of the top five countries with the biggest solar-powered electricity generation are in Asia. China holds the first place, while India and Japan rank third and fourth, respectively. Experts believe 2024 is set for an even more significant increase in solar generation.

Which country is responsible for 80% of solar module production?

Currently, China is responsible for 80-85% of global solar module production. The IEA's World Energy Investment 2024 report reveals that China is the only country globally that has reached the levels of clean energy investment needed in a net-zero-aligned world. Throughout 2023, it was responsible for a third of global clean energy investments.

Why is China focusing on solar power?

China has given strategic prioritisation to three industries: solar power, EVs and batteries. The nation's commitment is part of a broader strategy to ensure more affordable electricity, improve energy security, build its export markets and decrease carbon intensity by pivoting away from fossil fuels.

Is Asia's solar market a missed opportunity?

China aside, Asia's solar market remains widely untapped. This is a huge missed opportunity, considering that the region faces unique circumstances. On the one hand, it is home to around 60% of the world's population and will see massive energy demand growth in the upcoming years.

Is Vietnam ready for a solar-powered future?

Vietnam, with its exponential solar power deployment in 2020, adds another chapter to the blueprint that other Asian countries can follow in their energy transitions. With that said, Asia's path toward a solar-powered future is clear. Now countries should follow it.

Which countries have the fastest growing solar power market in the world?

Asia was among the engines behind this. The continent has witnessed a significant uptick in solar power capacity in recent years, becoming the fastest-growing market globally. According to data from Global Energy Monitor, between 2007 and 2024, Asian countries held four of the top seven positions in the biggest solar markets in the world.

The Astana Communiqué on Accelerating the Uptake of Renewables, signed by Central Asian governments and international partners in 2017, provides an action plan for resource assessments, integration of solar and wind power, and the adoption of policies to accelerate renewable energy deployment.
