Run your favourite appliances you'd usually use at home from your 12V system with our 2000W inverter. Allowing you to power multiple appliances up to 2000W, including chargers, kettles, air fryers, hair dryers, and your Starlink system, our inverters will change the way you go off-grid.

How many Watts Does a 2000 watt inverter produce?

Appliances that require a higher wattage to start up can also be run - the 2000W inverter will produce up to 4000W for 2 seconds. Engineered with a larger heat sink and advanced internal circuitry, the inverter runs noticeably quieter than other inverters, even when running larger loads.

How does a 12V inverter work?

The feature will cut the inverter's 12V supply when it detects AC power, saving your batteries from discharging and allowing for a more efficient power transfer. The AC switching feature is easy to use too - plug an IEC lead into the inverter, then hook the other end to a mains power point and turn the power on.

Do you need a 12V solar inverter?

Many off-grid systems require a 12V solar inverter to power everyday electronics and this one includes multiple protections to help things run smoothly and safely. Delivers a continuous power output of 2000W, with a peak surge of 4000W during load start-up.

How much power does a 12V DC to 120V AC converter produce?

Delivers a continuous power output of 2000W, with a peak surge of 4000W during load start-up. Converts 12V DC to 120V AC, providing a pure sine wave with a conversion efficiency exceeding 90% to minimize power loss during conversion.

Check the inverter efficiency rating and add that into the power requirement total. The ratings for batteries, solar panels and inverters are for their maximum output. Do not expect to get these results every hour every day. Always make sure to have reserve power at hand. A 2000 watt inverter may have a surge capacity of 4000 watts.

High quality inverters can be quite efficient but it still needs to be taken into account when thinking about how long your battery will supply power to the inverter. For example, an inverter outputting 1000W at 230V will draw current from a 12V battery as follows: $1000W/12V = 83.33A$ (Power/Voltage = Current)

For example, the inverter changes low voltage like 12, 24, or 48 volts into 210-240 volts. This is the power most household appliances need and is similar to the electricity supplied by the grid. The term "2000-watt" on a 2000W ...
