This means that the inverter that could run this unit needs to have a Continuous Power rating of more than 455 watts. So, a 500W inverter should do the trick, right? The answer is probably not. A 500W inverter can run this unit, but it probably won't be able to start it. This brings us to the next item on the list: The Surge Power rating.

Can all DC to AC Inverters convert AC to DC if used in reverse? Unfortunately, No. In a DC-to-AC inverter, the energy only flows one way. If you want to convert AC-to-DC, then you would need a charger or a charger converter/power supply. A battery charger takes the AC voltage and converts it to DC and charges a battery or battery pack.

Consider these additional costs when making your final budget. Materials. To add the necessary wiring for a 220v outlet, expect to pay around \$6 to \$8 per foot, plus the cost of the outlets. If the area you selected does not have the proper wiring in the walls to support a 220v outlet, this will incur additional costs for the wiring needed.
