

Kuwait invests 69 2 billion in energy storage batteries

Is Kulim a leader in the silicon carbide market?

"The market for silicon carbide shows accelerating growth, not only in automotive but also in a broad range of industrial applications such as solar, energy storage and high-power EV charging. With the Kulim expansion, we will secure our leadership position in this market," said Jochen Hanebeck, CEO of Infineon.

How much will Infineon invest in Kulim?

The planned expansion is backed by customer commitments covering about five billion euros of new design-wins in automotive and industrial applications as well as about one billion euros in pre-payments. Over the next five years Infineon will additionally invest up to five billion euros in Kulim during a second construction phase for Module Three.

What EVs will be made with solid-state batteries in 2025?

In addition to Toyota, Nissan plans to launch a production EV with a solid-state battery pack by 2028 and BMW by 2030. China's SAIC said in May that it has increased its investment in local battery startup Qingdao as part of its ambitious goal to sell 100,000 EVs with solid-state batteries in 2025.

Will China's first lithium-ion battery plant start rolling out EVs?

Meanwhile, the Chinese partner of Toyota and Honda expects its first wholly-owned battery plant to start rolling out conventional lithium-ion batteries later this month. The RMB 10.9 billion (\$1.5 billion) plant, Guangzhou's biggest ever, will produce an annual capacity of 36 gigawatt hours (GWh) by 2025, enough for 600,000 EVs.

How much energy does a qilin battery have?

For now, the batteries have achieved a cell-level energy density of 400 watt-hours per kilogram (Wh/kg) and have proven effective under extreme conditions, according to an announcement. By comparison, the maximum energy density of CATL's latest Qilin battery is 255 Wh/kg (per pack level).
