What are solar microinverters?

Microinverters are small electronic devices that convert direct current (DC) into alternating current (AC). One microinverter could fit the palm of your hand. The main factor differentiating microinverters from traditional inverters is that they operate at the panel level rather than the solar panel system as a whole.

What is a micro inverter?

A micro inverter is an inverter that is installed on solar panels to convert the direct current energy (DC) generated by the panels into alternating current (AC) electricity for use in the home. They are about the size of an internet router and one is installed underneath each solar panel.

How much does a microinverter cost?

Microinverters typically cost a couple of hundred dollars per unit. While they offer many advantages, which we will cover further, microinverters are notably costlier than string inverters when installed on an entire solar power system. Check out this video from Enphase to learn more about microinverters and their benefits.
