AC/DC adapters are commonly used external power supply units for electrical equipment which cannot directly draw power from the mains network. They convert alternating current (AC) into the required direct current (DC). Typically, such devices do not have space within their casing for the bulky components required for this conversion.

Regardless of the type of the power supply--AC or DC--there is a need to control the heat releases to prevent overheating in a bid to ensure the efficiency and reliability of a system. Heat sinks, cooling fans, and thermally active materials are widely used for this purpose, so that the components do not exceed the hottest acceptable point. ...
