

What if Sana'a Basin had a new pumping system?

During the current war and the closure of most Yemeni airports and seaports (particularly in the north), the average uptake of SPIS in Sana'a is increasing by 4.4 percent per year. If this trajectory were to continue, all old pumping systems in Sana'a Basin would be replaced or supported by SPIS within 15 years.

What is the population growth rate in Sana'a Basin?

The annual growth rate in Sana'a Basin was 5.5 percent in urban areas (where 86 percent of the total population live) and 3.2 percent in rural areas (14 percent of population) as of the 2004 population census, according to the Yemeni Central Statistical Organization (MOPIC CSO).

How does solar energy affect groundwater supply in Yemen?

The agricultural sector in Yemen is the dominant user of groundwater resources, accounting for around 90 percent of total consumption. Due to the current crisis, fuel required for pumps has become scarce and very expensive; as a result, solar energy has begun to play a role in the extraction and supply of groundwater for irrigation.

Can solar power be regulated in Yemen?

So far there has been no study in Yemen on what can be done to regulate the use of solar energy, especially in the field of irrigation. Solar pumps are seen as a potentially powerful solution to government shortcomings in providing electricity grid connections for agriculture.

Are solar pumps a good solution for agriculture?

Solar pumps are seen as a potentially powerful solution to government shortcomings in providing electricity grid connections for agriculture. The potential impact of solar pumps on excessive groundwater extraction is generally not seen as a major concern by most policymakers. Farmers are seeing solar pumps as both a pumping and an energy solution.

Air pollution has been a serious problem in Yemen's capital of Sanaa, but that's starting to change. How? Oddly enough, the ongoing war that began in 2015 between the government and a militia loyal to the country's former president feuding for control of the country helped jumpstart Sanaa's renewable energy industry.. Photo by Louis/Flickr In the spring of ...

Going beyond generalities, this paper looks in detail at the current uses and potential impact of solar-powered irrigation systems (SPIS) on the sustainability of the use of ...

Maximise annual solar PV output in Sanaa, Yemen, by tilting solar panels 15 degrees South. Sanaa, Yemen is a pretty good spot for generating solar energy all year ...

The Sana'a Center for Strategic Studies is an independent think-tank that seeks to foster change through knowledge production with a focus on Yemen and the surrounding region. The Center's publications and programs, offered in both Arabic and English, cover political, social, economic and security related developments, aiming to impact policy locally, regionally, and ...

SANAA, Dec. 10, 2019 - A man checks solar panels installed to power his water pump in Sanaa, Yemen, Dec. 8, 2019. Amid nearly five years of grinding war and electricity cut in Yemen, many Yemenis turn to solar power to keep lights on.

Starting in 2018, the NEA formulated a three-year action plan for clean energy consumption. From 2018 to 2020, the waste from wind and solar power has declined year by year, and the utilization rate of wind and photovoltaic power has increased significantly. By 2020, the wind power utilization rate had reached 97%, and solar power stood at 98%.

Solar Energy. Solar Photovoltaic {PV} is a significant source of energy for pumping on irrigation farms of all sizes, ranging from board acre cropping to protected horticulture. ... CEW service center takes care of its customers after sale services and special care for the contract clients with 24/7 on call engineers included holidays and ...

We also pre- dict the amount of solar energy available in Sanaa and emphasize its impor- tance as an energy source. 2. Experimental details The solar cell panel (SCP) under ...
