The on-grid tie inverter adopts a wide DC input range of 200-820V and a wide AC output range of 208-480V to adapt to the needs of different occasions. The noise of a 240V grid tie inverter is no more than 50 dB. Strong networking and flexibility to support RS485, RS232, and WiFi communication modes are the key points of the grid-connected inverter.

PV systems are widely operated in grid-connected and a stand-alone mode of operations. Power fluctuation is the nature phenomena in the solar PV based energy generation system.

When a grid anomaly is detected, the on-grid inverter can quickly switch to off-grid mode, utilizing the PV power and storage batteries to power the loads and ensure continuous operation of critical equipment. When the grid returns to normal, the inverter can automatically switch back to the grid-connected mode, achieving a seamless transition.
