

# Tunisia has high gross profit margin for energy storage

What is the energy sector in Tunisia?

The energy sector in Tunisia includes all production, processing and transit of energy consumption in this country. The production involves the upstream sector that includes general oil and gas, the downstream sector that includes the only refinery in Tunisia and most of the production of natural gas, and varied electrical/renewable energies.

What will Tunisia's economy look like in 2023?

With the right policies in place, Tunisia's economy has significant potential to thrive in the years ahead. Tunisia's GDP growth for 2023 is expected to be around 2.3 percent, subject to considerable variation depending on the progress of financing conditions and structural reforms.

Why does Tunisia have a high inflation rate?

In addition, Tunisia's inflation rate reached 10.4% in February 2023, the highest in over three decades, largely driven by rising prices for energy and food. These factors have put significant pressure on the economy, making it all the more urgent to implement reforms to promote sustainable growth.

How does reform affect Tunisia's economy?

However, it is crucial to minimize the impact of reform on vulnerable households by providing stable tariffs and transfers. Tunisia's economy has been affected by a variety of challenges, including a higher trade deficit and consumer subsidies. The country's limited access to international financing has made local financing of the debt challenging.

What reforms are needed in Tunisia?

Urgent reforms are needed to improve the business environment and strengthen competition. Tunisia's GDP growth for 2023 is expected to be around 2.3 percent, subject to considerable variation depending on the progress of financing conditions and structural reforms.
